

Information Security Management System (ISMS) Scope

Document ID: ISMS-SCP-001 | Version: 1.0 | Status: Draft for Portfolio Simulation | Date: 11 August 2026

1. Purpose

This document defines the boundaries and applicability of the TechNova Solutions Pvt. Ltd. ISMS for the simulated ISO/IEC 27001:2022 implementation project.

2. Scope Statement

The ISMS covers the information, people, processes, applications, technology and supporting services used to design, develop, operate and support TechNova's cloud-based SaaS services, including customer support and associated corporate information-processing activities.

3. Organizational Boundaries

Included: information security governance; software development and deployment; production operations; customer support; IT administration; employee access management; information security incident management; supplier security; backup and recovery; and supporting corporate functions where they process or protect information within scope.

4. Locations

The scope includes TechNova's corporate operations in India and the cloud-hosted environments used to deliver the in-scope SaaS services. Remote working activities are included where employees access in-scope information or systems.

5. Technologies and Information Assets

Included technologies and information include cloud infrastructure, production databases, source-code repositories, identity and access-management systems, corporate endpoints, business applications, logging/monitoring systems, backup systems and customer/employee/business information processed by these systems.

6. Interfaces and Dependencies

Key dependencies include cloud service providers, software and technology suppliers, internet connectivity, third-party SaaS applications, telecommunications providers and customers. Supplier and interface risks are considered within the ISMS where they can affect information security outcomes.

7. Exclusions

Personal activities unrelated to company information, systems and services are outside the ISMS scope. Physical infrastructure owned and fully managed by third-party cloud providers is not directly controlled by TechNova; however, relevant supplier and contractual security requirements remain within scope.

8. Scope Review

The scope will be reviewed at planned intervals and when significant changes occur to organizational structure, services, technology, locations, legal requirements, suppliers or business processes.
