

Risk Criteria and Acceptance Criteria

Document Control

Document ID: ISMS-RC-001 | Version 1.0 | Owner: ISMS Manager | Status: Draft for Portfolio Simulation

Risk Bands

Level	Expected Response
Low	Monitor and maintain existing controls.
Moderate	Consider treatment and monitor.
High	Treatment normally required; management oversight.
Critical	Urgent treatment and senior management attention.

Acceptance Principles

Acceptance considers business objectives, applicable requirements, contractual obligations, customer impact, control feasibility and cost-benefit. Acceptance must be documented and assigned to an authorized risk owner.

CIA Considerations

Impact should consider confidentiality, integrity and availability independently where appropriate.

Escalation

Critical risks are escalated to top management. High risks are escalated to the relevant management owner and ISMS Manager. Exceptions require documented rationale and approval.
