

ISO/IEC 27001 Continual Improvement Guide

Purpose

Folder 11 closes the ISMS lifecycle by showing how audit findings, management decisions, incidents, risks, lessons learned and performance data become improvement actions.

Corrective action

When a nonconformity occurs, the organization should react to it, control/correct it as appropriate, determine its cause, implement action and review whether the action was effective.

Continual improvement

Improvement is broader than corrective action. It includes opportunities to enhance processes, controls, measurement, technology, competence and overall ISMS performance.

PDCA connection

Folders 01–05 represent planning, Folder 06–08 represent operation, Folders 09–10 represent checking, and Folder 11 represents acting and improving.

Auditor perspective

An auditor can look for evidence that findings are not simply closed administratively: causes are addressed, actions are implemented, and effectiveness is evaluated.

Portfolio note

All examples are simulated portfolio documents. They demonstrate methodology and evidence structure rather than certification or real organizational activity.
